DOCUMENT TO PRODUCE

Chapter 1: The Executive Secretary

I: Description

A- Definition

The secretary or executive assistant is the direct collaborator of a senior executive, a department head or a business manager. She is responsible for running the latter's secretariat and assisting him/her in the management and administrative organization of his/her department. She has many contacts with the whole company and outside.

B- Activities

More qualified and experienced than the other secretaries, the executive secretary is the trusted person of one or more directors. She manages their appointments and schedules. She reads their mail, prepares their correspondence, organizes meetings for which she most often writes the minutes or the summary. It is still she who supervises their business trips.

The executive secretary selects the information and documents coming from the various departments of the company or from outside and transmits to the departments concerned, the instructions of her superiors. She prepares the **files**[1], gathers the information necessary for decision-making and sends it to the recipients.

II: The working environment

A- Principle

This is the environment par excellence for the development of any repetitive service work. Hence, it is tidy, furnished, cheerful, clean and warm in order to put potential visitors at ease. This setting is calm, comfortable and with a pleasant decoration.

- Decoration

The secretary's office is decorated without exaggeration according to the personal needs of the occupant. However, it contains flowers, photos...

- Colours

It must be taken into account because they influence character. Cold colours slow down psychological functions. It is thus necessary to proscribe the colours red (exciting), black and purple (depressing), white (tiring).

B- Colour chart

Colours	Reflective powers	Psychological effects
White	85%	Causes fatigue and boredom
Blue	25%	Facilitates thinking, can be tiring
Green		Facilitates reflection
Red		Excites and stimulates

With regard to the keeping of a file, there are 03 phases in the life of a file, in particular its **creation** (identification by a name or title and determination of the various elements or sub-folders which make it up), its use (consultation of a file, retrieval or arrangement of documents) and its archiving, hence the removal of the room where the files in use are located for the room intended for storage.

Indexing of a filing system is the visual indication of the filing levels and the identification of the documents. To index the files, **guides**, dividers made of cardboard, metal or plastic are used. They are the same size as the files, but have tabs on which the information needed for filing is written) and window tabs (when the guides do not have tabs, window tabs of different sizes or gummed butterflies are used).

Signage is the visual means of highlighting certain features common to a group of files. There are two types of signage: "**fixed**" (folder colours, coloured box, etc.) and "**mobile**" (tab, jumper, etc.).
